

# PathViewCloud Security Statement

PathViewCloud.com utilizes some of the most advanced technology for Internet security available today. When you access our site using Netscape Navigator 6.0 or Microsoft Internet Explorer versions 5.5 or higher, Secure Socket Layer (SSL) technology protects your information using both server authentication and data encryption, ensuring that your data is safe, secure, and available only to registered Users in your organization. Your data will be completely inaccessible to anyone outside of your organization.

PathViewCloud.com provides each User in your organization with a unique user name and password that must be entered each time a User logs on. PathViewCloud.com issues a session "cookie" only to record encrypted authentication information for the duration of a specific session. The session "cookie" does not include either the username or password of the user. PathViewCloud.com does not use "cookies" to store other confidential user and session information, but instead implements more advanced security methods based on dynamic data and encoded session IDs. In addition, PathViewCloud.com is hosted in a secure server environment that uses a firewall and other advanced technology to prevent interference or access from outside intruders.

## Protecting Your Information

We use strict security policies, military-grade encryption, and world-class data centers to protect your information, including:

**SSL:** All communication to and from microAppliances and the PathView Cloud web user interface is encrypted with industry standard 128-bit SSL encryption.

**FlowView Plus Encryption:** Your FlowView Plus information is encrypted while at rest on the PathView Cloud Servers with your own key using military-grade **256-bit AES** to secure your data.
