

PathView™ Partner End of The Year Promotion!

Limited
Time

Start off 2012 ensuring predictable and consistent performance of your customers' business critical applications. Not only do you need to detect problems as soon as they occur in the network, but also pinpoint where and why they are occurring. PathView Cloud's embedded performance monitoring service enables you to resolve application performance problems and differentiate your business, creating new revenue *and* becoming a reliable partner.

For Only \$1.15/ Day You Will Easily Resolve Network Challenges – For Each and Every One of Your Customers

Expand you managed services and provide the highest levels of embedded network and application performance assurance to your customers - and cut significant troubleshooting costs at the same time.

What is the AppNeta End of the Year Promotion?

As an AppNeta Partner, you know the value of PathView Cloud and how it enables your business to proactively and remotely manage end to end network and application performance. By participating in the promotion you can embed PathView into your existing services and deliver all the benefits of PathView Cloud for just \$35/month per site - that means for \$1.15/day you can:

- Continuously Monitor Your Customers' Networks 24X7
- Gain complete insight of 3rd party networks – without going on-site
- Quickly identify What is causing a problem and Where in the Network?
- Proactively Avoid Service Failures, Eliminate Truck Rolls, Reduce Trouble Tickets
- Deliver SLA Validation & Customized Monthly Reports

**\$35/month per site
= \$1.15/day**

Your Investment in This Special End of the Year Promotion Brings You Real Cost Savings!

The End of the Year Promotion equips you with **25 microAppliances**:

+ **AppView Voice OR AppView Web**

- 24x7 Proactive Monitoring
- Customized Reports & Critical Alerts
- Upsell Opportunities
- Technical Onboarding
- Sales & Marketing Enablement
- Direct Shipping to Customer Sites
- Monthly Billing Option

The PathView microAppliance remotely measures performance characteristics such as jitter, latency and available bandwidth to any IP-addressable target worldwide.
