

FlowView: Monitor Applications, Not Just Traffic

With application aware network traffic analysis, know instantly how every application impacts every end user. Analyze network traffic and application performance with more granularity than traditional network traffic analysis tools.

Features

Intelligent Application and User Identification

Monitor over 1300 classified applications' behavior, not just port and protocol traffic. FlowView uses protocol dissection, pattern matching, semantic and conversational awareness, and flow registration to go beyond flow records and actually identify applications and users. Create custom apps specific to your enterprise that have not been auto-identified. With FlowView, you get five-minute granularity and 90 days of data retention, regardless of network traffic. Receive alerts when specific application's or classes of applications' usage changes. Finally, get a personal view of performance with user-specific application usage.

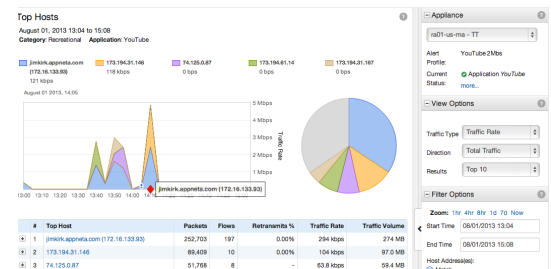

Simple Deployment

Universal deployment means not having to change anything. Traditional network traffic monitoring requires multiple complex components working perfectly together before you get any insight into network usage: netflow-capable hardware, device reconfiguration, third-party flow collection, and analysis software running on its own server and database. FlowView requires none of these things.

Ensuring Security and Affordability

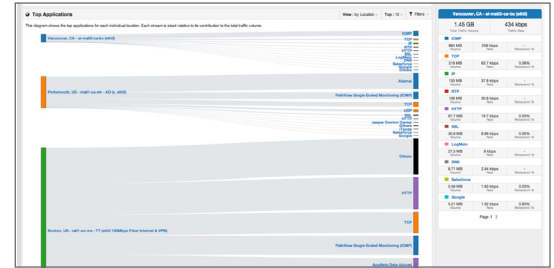

Make sure nothing happens to any network traffic. FlowView captures, analyzes, compresses, and encrypts all traffic data on a single box, reducing the network overhead and making it truly secure. FlowView compresses records right at the point of collection, freeing up extra bandwidth for, well, actual applications.

Scalability that grows with you

As you grow our solution scales with you. Deploy across hundreds and thousands of locations, with support up to traffic loads of 10Gbps. Compare performance trends across 90 days of retained data without having to implement stream to disk approaches. Finally, easily monitor performance across office and remote locations with our single pane view of performance across all monitors.

Plans

AppNeta’s virtual and physical microappliances are zero administration devices that remotely test and troubleshoot complex networks, even through third-party infrastructure.

	OFFICE	LARGE OFFICE	DATACENTER	VOLUME
# of Employees	up to 200	over 200	N/A	More than 20 locations? Contact us at (800) 508-5233 and we'll customize pricing and a deployment for your environment.
# of Apps Supported	up to 25	up to 50	Up to 50	
# of Internet Providers	1	1+	1+	
Flows per Second	2,500	5,000	50,000	
Appliance Type**	physical: m30	physical: r40	physical: r400	
Deployment	1x 1Gbps	2x 1Gbps	2x 1Gbps 1x 10Gbps	

**For more detailed information on our microappliances please visit the resources page on our website and look for our Appliance datasheets.

ABOUT APPNETA

AppNeta is the only application performance monitoring (APM) company to provide solutions for all applications - applications you develop internally, business-critical SaaS applications you use and the networks that deliver them. AppNeta’s SaaS-based solutions give Development, DevOps and IT Operations teams essential performance data to see across their web, mobile and cloud-delivered application environments as well as pinpoint tough performance bottlenecks. With AppNeta, customers have all of the performance data they need to assure continual and exceptional delivery of business-critical applications and end-user experience. For more information, visit www.appneta.com.
