

## DATASHEET

# Application Delivery

AppNeta provides performance insight for any application on any network. Use AppNeta's end-to-end active performance management tools to measure the actual network performance and how it's affecting your critical applications and business services. With one extremely lightweight solution, you can continuously measure performance over your WiFi to local servers; over a VPN to remote offices; and over the internet to web applications and into cloud services.

## Features

### Continuous, Lightweight Monitoring

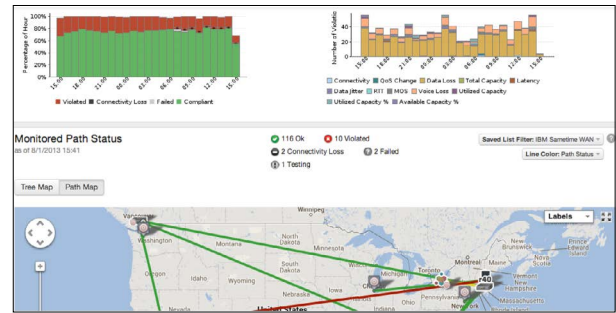

Get insight into any network, even cloud providers' networks, by sending and receiving precisely timed network traffic to assess performance in real time. AppNeta's always-on monitoring gives one-minute granularity on latency, data loss and jitter, stored for up to a year. The real-time monitoring is extremely lightweight, so you can understand the performance of your critical applications without slowing them down.

### Correlate Application and Network Performance

With application-based SLAs, AppNeta's Application Delivery component automatically knows when network performance blips are just blips, and when they're affecting end users. AppNeta's continuous stream of performance insight is compared against your application-specific SLAs, so you will know exactly when and how network performance impacts your application performance.

### Find and Fix Problems Fast on Any Network

The Application Delivery component automatically runs diagnostic tests when poor performance is detected to pinpoint the locations and cause of more than 80 network faults—even if they are occurring on devices you don't own or control. Root cause analysis is triggered automatically by violations of your application-specific SLAs, so it's clear when network performance impacts your application performance. Validate that QoS is being honored at every hop, even over the internet.

## Deployment Options

AppNeta's virtual and physical Monitoring Points are zero-administration devices that remotely test and troubleshoot complex networks, even through third-party infrastructure.

	Small office	Large office	Data center	Volume
<b># of Employees</b>	up to 500	more than 500	N/A	More than 20 locations? Contact us at 800-508-5233 and we'll customize pricing and a deployment for your environment.
<b># of Apps Included</b>	15	45	45	
<b># of Internet Providers</b>	1	1+	1+	
<b>Appliance Type*</b>	Physical: m35 Virtual: v35	Physical: r45	Physical: r400	
<b>Deployment</b>	802.11 a/b/g/n WiFi or 6x 1Gbps	6x 1Gbps	6x 1Gbps 2x 10Gbps

### ABOUT APPNETA

AppNeta is the leader in proactive end-user performance monitoring solutions built for the distributed digital enterprise. With AppNeta, IT and Network Ops teams can assure continual and exceptional delivery of business-critical applications. AppNeta's SaaS-based solutions give IT teams essential application and network performance data, allowing them to continuously monitor user experience across any application, network, data center or cloud.
